

The mental wellness of children and adolescents is vital as they progress through their various developmental and educational stages.

- Four million children and adolescents in this country struggle with a serious mental disorder that causes significant functional impairments at home, at school, and with peers.

- 50% of all lifetime cases of mental illness begin by age 14 and 75% by age 24.

With early and effective intervention, the negative effects of a mental health or developmental issue **can be lessened significantly**, enabling children and adolescents to succeed in school, to develop socially, and to fully experience the developmental opportunities of childhood.
